

PROPENU

Admin Dashboard

End To End Role, Action Criteria And Process Flow

Professional development documentation for explaining dashboard responsibilities, modules, and property lifecycle.

Executive Overview

This document explains how the Propenu admin dashboard works from login to final property publishing. It defines every major role, what each role can do, which modules they use, and the action criteria for the property posting process.

Primary Goal

- Manage real estate operations in one dashboard
- Control access by user role
- Track property and payment lifecycle

Core Flow

- Login
- Role-based dashboard
- Property or project management
- Verification and publish
- Progress and finance tracking

Best One-Line Explanation

Propenu admin dashboard is a role-based operations system where each team role gets controlled access to manage users, properties, projects, subscriptions, payments, communications, and publishing workflows.

1. Role And Responsibility Matrix

The logged-in user's roleName controls both dashboard routing and sidebar access. Super Admin and Admin have broad control, while Sales, Customer Care, and Accounts roles focus on their work areas.

Role	Main Responsibility	Main Actions	Access Criteria
Super Admin	Complete business and system control	Manage projects, properties, team, users, subscriptions, accounts, notifications, automations, blogs	Highest privilege role
Admin	Day-to-day operational control	Manage listings, users, team credentials, subscriptions, locations, communications	Admin-level privilege
Sales Manager	Sales and project monitoring	View projects/properties, track team leads and conversions, support sales agents	Sales manager role
Sales Agent	Assigned property/project work	View projects, property categories, property progress, complete data collection	Sales agent role
Customer Care	User and property support	View property categories, check property progress, assist users	Customer care role
Accounts	Finance and subscriptions	Manage plans, payments, active subscriptions, payment history, revenue	Accounts role
Agent	Business partner/listing user	KYC, profile, verification, plan activation, published listings	External/business user role
Builder	Project owner	KYC, account activation, add projects, promote/feature projects	Builder user role
User / Owner / Buyer	Customer-side activity	KYC, plan purchase, property search, shortlist/browse properties	Normal user role

2. Role Wise Action Criteria

Super Admin

- Full dashboard access
- Create and transfer credentials
- Assign executives
- Manage team, users, properties, projects, subscriptions, accounts, notifications

Admin

- Operational management access
- Manage property listings and users
- Create credentials and assign work
- Manage locations, blogs, and communications

Sales Manager

- View dashboard and projects
- Review property categories
- Track team leads and conversions
- Monitor sales agent work

Sales Agent

- View assigned work areas
- Complete property data collection
- Use three-step property posting flow
- No final verify/publish step in wizard

Customer Care

- View properties and progress
- Support users during listing process
- Check listing status and missing information

Accounts

- Manage subscription plan sections
- Review payment list and history
- Track active subscriptions and revenue by plan

3. Dashboard Module Map

The sidebar groups business functionality into clear modules. Access to each module depends on the logged-in role.

Module	Purpose	Typical Users
Dashboard	Role-based analytics and summary view	Super Admin, Admin, Sales Manager, Sales Agent, Accounts
Projects	Manage real estate projects and promoted project types	Super Admin, Admin, Sales Manager, Sales Agent
Properties	Residential, Commercial, Agricultural, and Land listing management	Super Admin, Admin, Sales, Customer Care
Property Progress	Track completion status and pending listing work	Admin, Sales Agent, Customer Care
Operations	Internal team management, credentials, assignment	Super Admin, Admin
Users	Manage all users, builders, and agents	Super Admin, Admin
Subscriptions	Manage agent and owner service plans	Super Admin, Admin, Accounts
Accounts	Payments, active subscriptions, history, revenue reports	Super Admin, Admin, Accounts
Notifications	Push, email, WhatsApp, and automation communication	Super Admin, Admin
Locations / Blogs	Location data and content management	Super Admin, Admin

4. End To End Business Flow

1

Login

Auth

User signs in. A token is stored in browser cookies. Without token, protected routes redirect to signin.

2

Role Detection

Role

Dashboard fetches logged-in user details. roleName decides dashboard component and sidebar menu.

3

Module Access

Access

User sees only the modules assigned to that role, such as Properties, Projects, Accounts, Operations, or Notifications.

4

Business Action

Work

Team member manages property, project, user, subscription, payment, notification, location, or blog based on permission.

5

Progress Tracking

Track

Property progress and workflow pages show current status such as pending, in progress, done, or failed.

6

Reporting

Report

Accounts and dashboard pages show payments, subscriptions, revenue, and analytics summaries.

5. Property Posting Lifecycle

The property posting controller supports Residential, Commercial, Land, and Agricultural categories. It starts with a draft, then saves each step through category-specific property APIs.

6. Property Step Action Criteria

Step	Required Action	Validation Criteria	API
Draft	Create or load property draft	Category must be active; draft ID must exist before save	POST /api/properties/{category}/draft
Basic	Enter listing and category details	Listing type, property type, price, required category fields	PATCH /api/properties/{category}/{id}/basic
Location	Enter address and pin map	Address, 6-digit pincode, location pin, locality, city, state	PATCH /api/properties/{category}/{id}/location
Details	Add full property profile	Category-specific fields, amenities/specifications/gallery where applicable	PATCH /api/properties/{category}/{id}/details
Verification	Upload ownership proof	Document type and at least one document file required	PATCH /api/properties/{category}/{id}/verification

Agent Flow Rule

If createdByBasedUserRole is agent, the property wizard stops after Step 3: Property Profile. The agent does not get the Verify And Publish step in this dashboard flow.

7. Category Wise Required Fields

Residential

- Carpet area and built-up area
- Bedrooms, bathrooms, balconies
- Price and price per sqft
- Facing and furnishing
- Construction status, age or possession date
- Transaction type

Commercial

- Cabins and seats
- Carpet area and built-up area
- Price and price per sqft
- Furnished status and wall finish status
- Property age and construction status
- Transaction type

Land

- Plot area
- Road width
- Price
- Price per sqft
- Dimensions when available

Agricultural

- Total area
- Road width
- Price
- Price per sqft
- Agricultural-specific details in profile step

Verification Documents

- Encumbrance Certificate (EC)
- Sale Deed
- Municipal Tax Receipt
- Water or Electricity Bill
- Accepted upload types: JPG, PNG, PDF. Images are compressed before upload.

8. User Workflow Status And Role Lifecycle

Workflow pages represent user lifecycle using statuses such as done, pending, inprogress, and failed. These help teams understand which action is completed and what is still pending.

Role	Workflow Steps
Sales Manager	Account created -> KYC verified -> Account active -> Team assigned -> Sales tracking
Sales Agent	Account created -> KYC verified -> Manager assigned -> Account active -> Lead tracking
Agent	Account created -> KYC verified -> Agent profile -> Agent verified -> Plan active -> Listings live
Builder	Account created -> KYC verified -> Account active -> Projects added -> Featured listing
User / Buyer / Owner	Account created -> KYC status -> Account active -> Plan purchased -> Property search
Customer Care	Account created -> KYC status -> Account active -> Support active
Accounts	Account created -> KYC status -> Account active -> Finance access

9. API And Development Reference

Area	Reference
Route protection	src/pages/ProtectedRoute.jsx and src/pages/PublicRoute.jsx
Dashboard routing	src/pages/Dashboards/MainDashboard.jsx and DashboardRouter.jsx
Sidebar role menu	src/components/common/Sidebar.jsx
Role workflow config	src/pages/users/AllUserInDetails/roleConfig.js
Property wizard	src/pages/Residential/PostResidentailProperty/PostPropertyControler.jsx
Basic details step	src/pages/Residential/PostResidentailProperty/Step1BasicDetails.jsx
Location step	src/pages/Residential/PostResidentailProperty/Step2LocationDetails.jsx
Profile details step	src/pages/Residential/PostResidentailProperty/Step3PropertyDetails/MainContainer.jsx
Verify publish step	src/pages/Residential/PostResidentailProperty/Step4VerifyPublish.jsx
Save thunk	src/store/common/propertyThunks.js
Property APIs	src/features/property/propertyService.js

Core Property APIs

- POST /api/properties/{category}/draft
- GET /api/properties/{category}/draft/me
- PATCH /api/properties/{category}/{id}/basic
- PATCH /api/properties/{category}/{id}/location
- PATCH /api/properties/{category}/{id}/details
- PATCH /api/properties/{category}/{id}/verification
- GET /api/properties/{category}/{id}

10. Simple Explanation For Presentation

Short Explanation

This dashboard is a role-based admin system for managing Propenu real estate operations. Every user has a role, and that role decides what they can see and what actions they can perform. Super Admin and Admin manage the full system. Sales teams manage property and project activity. Customer Care supports users. Accounts manages subscriptions, payments, and revenue.

Property Flow Explanation

The property process starts by creating a draft. Then the team fills basic details, location details, and category-specific property profile information. If the user is not an agent, they upload verification documents and publish the property. After publishing, the property appears in its category section such as Residential, Commercial, Land, or Agricultural.

Key Rules To Remember

- Dashboard access depends on the logged-in user's roleName.
- Sidebar menu items are role-specific.
- Property creation always starts with a draft.
- Each property step saves data to a separate API endpoint.
- Agent-created property flow ends after property profile details.
- Non-agent users complete verification and publish.
- Accounts role focuses on plans, payments, subscriptions, and revenue.
